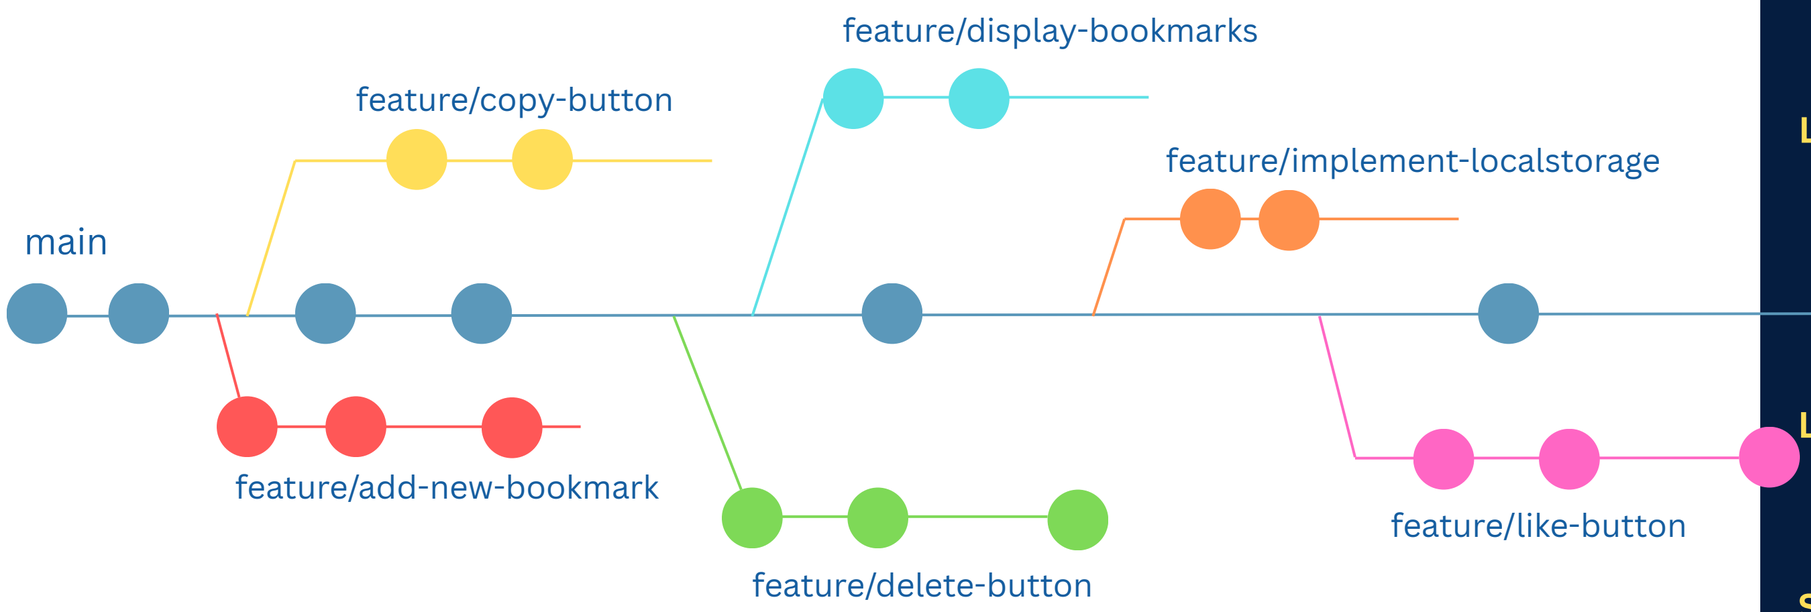
User Story

As developers, we spend a lot of time reading articles and technical resources online. We want a simple way to save useful links along with a title and short description so that we can easily remember what each resource is about without reopening it.

We also want to share these bookmarks with other developers, view each other's saved resources, and interact with them by liking useful links. The system should allow us to select different users, view their bookmarks in reverse chronological order, copy links to the clipboard, and add new bookmarks easily through an accessible form.

Main Features



Level 100

Display bookmarks

- for 1 user
- for multi users
- reverse chronological order

Level 200

Add copy and like buttons

- Add copy button
- Add like button

Level 300

Allow users to add new bookmark

Stretch

Add delete button
Validate URL

DATABASE

```javascript
// Mock data of bookmarks for 5 users
const userDatabase = {
  "1": [
    {
      name: "Figma",
      url: "https://figma.com",
      description: "Collaborative interface design tool.",
      timestamp: "2026-01-13T12:15:00Z"
    },
    {
      name: "MDN Web Docs",
      url: "https://developer.mozilla.org",
      description: "Comprehensive documentation for web developers.",
      timestamp: "2026-02-20T14:12:00Z"
    }
  ],
};

function firstLoad(userDatabase) {
  // localStorage.clear();
  for (const [userId, data] of Object.entries(userDatabase)) {
    // Only load db to localStorage if it doesn't already exist
    if (!localStorage.getItem(`stored-data-user-${userId}`)) {
      localStorage.setItem(`stored-data-user-${userId}`, JSON.stringify(data));
    }
    console.log("Database ready")
    }
}
firstLoad(userDatabase)
```

TESTING

To check if we get correct user count from storage.js

```
// configuration
"jest": {
    "testEnvironment": "jsdom"
  }

// testing

import { getUserIds } from "./storage.js";

test("User count is correct", () => {
  expect(getUserIds().length).toEqual(5);
});
```

TESTING

To check if we successfully fetch data of bookmarks of each user from storage.js

```
import { getData } from "./storage.js";

test("Get data successfully from storage.js", () => {
  expect(typeof(getData(1))).toEqual("object");
  expect(typeof(getData(2))).toEqual("object");
  expect(typeof(getData(3))).toEqual("object");
  expect(typeof(getData(4))).toEqual("object");
  expect((getData(1)[0].name)).toEqual("Figma");
})
```

TESTING

To check if we successfully sort bookmarks from newest to oldest storage.js

```
import { getData } from "./storage.js";

test("user 4 bookmarks sorted newest to oldest (3 items)", () => {
  const sorted = getData(4).sort((a, b) => new Date(b.timestamp) - new Date(a.timestamp))
  expect(sorted[0].name).toBe("AWS")       // 2026-02-15
  expect(sorted[1].name).toBe("Docker")    // 2026-02-14
  expect(sorted[2].name).toBe("AWS-test")  // 2026-02-12
})
```
